Department:	Recover Lost Data
Full Name:	Robert Bernstein
Email:	rdb@silcom.com
Priority:	High

System Details

Operating System:	WIN2K
Windows Service Pack (ex. SP2):	

Recover Directories Not Each File Individually

The drive is only slightly damaged.

There are thousands of files on the damaged drive. Your program quickly displayed a directory tree of files. But I cannot see how to recover entire directories. It seems only to allow individual files to be recovered, one tedious file at a time. That is of no value to me.

How do I recover directories, maintaining the directory structure?

Can I just recover the directories on the damaged drive without having to first copy them to another drive?

PLEASE include this message in your reply as your system does not seem to give me a copy. Thanks!
